PROFILE SUMMARY

SOC Analyst with hands-on experience in monitoring, investigating, and responding to security events using SIEM, EDR, Sysmon and forensic tools. Skilled in malware investigation, phishing analysis, Active Directory log review, incident triage and RCA documentation. Strong knowledge of SOC processes, security controls, forensic acquisition, artifact analysis and SIEM rule validation. Passionate about cybersecurity, continuous learning and contributing to enterprise security operations.

PROFESSIONAL EXPERIENCE

TechOwl — SOC Analyst

Jan 2025 – Present

SIEM Administration & Client Onboarding

- Lead end-to-end onboarding of new enterprise clients into the SIEM platform, including requirement gathering, architecture discussion, log source identification, and integration planning.
- Handle complete device onboarding lifecycle such as firewalls, servers, endpoints, Active Directory, cloud platforms, and security tools using agents, syslog, APIs, and custom scripts.
- Deliver client training sessions covering SIEM dashboards, alerts, incident workflows, reporting, and operational best practices from onboarding start to go-live.
- Actively participate in technical meetings with clients to explain integration status, resolve log gaps, tune detections, and align security use cases.

SOC Operations & Incident Handling

- Monitor and triage 100+ daily security alerts from CrowdStrike Falcon EDR, Sysmon, Windows Event Logs, NxLog, and cloud security logs.
- Perform malware investigations using process tree analysis, command-line inspection, hash reputation checks, sandbox analysis, and MITRE ATT&CK mapping.
- Conduct phishing investigations including email header analysis, URL reputation checks, DMARC/SPF/DKIM validation, and attachment analysis.
- Perform detailed Windows and Active Directory log analysis (Event IDs 4624, 4625, 4688, 4672, 4720, Sysmon events) to detect brute force, lateral movement, privilege escalation, and persistence techniques.

Advanced Troubleshooting & RCA

- Handle complex SIEM ingestion issues, parsing errors, timestamp mismatches, collector failures, and correlation rule misfires.
- Prepare detailed Root Cause Analysis (RCA) reports including incident timelines, IOCs, attack flow, business impact, and remediation steps.
- Support large enterprise clients during critical incidents, ensuring fast containment and minimal operational impact.

Additional Responsibilities

- Optimize detection rules and reduce false positives through tuning and whitelist management.
- Maintain SOC playbooks, SOPs, and onboarding documentation.
- Work closely with implementation and engineering teams for SIEM customization and scaling.

Macrotech Global — Network Engineer

May 2024 – Sep 2024

- Designed, installed, and configured enterprise network infrastructure including Cisco routers (ISR series), managed layer 2/3 switches, DNS servers for internal name resolution, proxy servers for content filtering and traffic inspection, and DHCP services supporting 200+ network endpoints across multiple VLANs.
- Implemented network security hardening measures through routing protocol optimization (OSPF, EIGRP), granular Access Control List (ACL) configurations to enforce least-privilege network access policies, port security on switch interfaces, and VLAN segmentation strategies isolating critical business systems from general user networks.
- Executed advanced network troubleshooting and security analysis utilizing Wireshark for packet capture and protocol analysis to identify malicious traffic patterns, Nmap for network discovery and vulnerability scanning, and baseline performance monitoring tools to detect anomalous bandwidth utilization and potential data exfiltration attempts.
- Deployed and maintained network security controls including firewall rule optimization, VPN configurations for secure remote access, network access control (NAC) implementations, and regular security patch management for network devices.

PROJECTS

SOC Automation Project (Wazuh + TheHive + Shuffle)

- Architected and deployed a production-grade SOC automation lab environment integrating Wazuh SIEM for centralized log collection and correlation, TheHive case management platform for incident tracking and collaboration, and Shuffle SOAR for automated response workflows, enabling real-time alert ingestion, threat intelligence enrichment via VirusTotal and AbuseIPDB APIs, and automated ticket creation with 80% reduction in manual triage time.
- Developed automated incident response playbooks for brute-force authentication attacks detecting repeated failed login patterns, malware execution events triggering immediate endpoint isolation workflows, and File Integrity Monitoring (FIM) alerts for unauthorized changes to critical system files, with comprehensive analyst workflow integration in TheHive including evidence collection, IOC extraction, severity scoring, and escalation procedures.
- Implemented custom detection rules and correlation logic identifying multi-stage attack patterns, configured automated containment actions including network isolation and process termination, and established metrics dashboards tracking MTTD, MTTR, and false positive rates.

CyberGuard | Threat Detection & Monitoring System

- Engineered comprehensive threat detection logic leveraging regex patterns and behavioral analytics to identify brute-force authentication attempts (threshold-based failed login detection), malware execution indicators (suspicious process spawning, unsigned binary execution, command-line obfuscation), and unauthorized access events (privilege escalation, lateral movement, off-hours access anomalies).
- Established streamlined alert triage procedures incorporating manual malware sandboxing using VirusTotal and ANY.RUN interactive analysis platforms to safely detonate suspicious files, observe runtime behavior, analyze network communication patterns, identify persistence mechanisms, and extract actionable IOCs for detection rule enhancement.

- Created custom detection signatures for common attack vectors including PowerShell obfuscation, WMI abuse, scheduled task persistence, and credential dumping attempts, validated against red team engagement scenarios.

Mobile & Cloud Forensics Investigation

- Conducted comprehensive digital forensic examinations performing bit-by-bit forensic imaging and logical extraction of mobile device artifacts including SMS/MMS messages, call logs, application data, GPS location history, and deleted file recovery using industry-standard tools Autopsy for disk image analysis, FTK Imager for forensic acquisition preserving chain of custody, and ADB (Android Debug Bridge) utilities for live device data extraction.
- Investigated cloud-linked data synchronization analyzing artifacts from Google Drive, iCloud, Dropbox, and OneDrive, recovering cloud sync credentials, authentication tokens, file metadata, revision history, and deleted cloud storage items supporting forensic timeline reconstruction and user attribution in investigation scenarios.
- Documented complete forensic methodologies maintaining detailed chain of custody records, generating comprehensive investigation reports with evidence exhibits, timeline analysis, and expert findings suitable for legal proceedings.

TECHNICAL SKILLS

SIEM & EDR Platforms: Wazuh (Advanced rule creation, custom decoders, log analysis), FortiSIEM (Correlation rules, incident workflows), Splunk (SPL queries, dashboard creation, alert configuration), CrowdStrike Falcon (Threat hunting, Real-Time Response, custom IOA development, prevention policy management)

DFIR & Forensics: FTK Imager (Forensic imaging, evidence preservation), Autopsy (Timeline analysis, keyword search, file carving), Volatility (Memory forensics, process analysis, malware detection), IDA Pro (Static malware analysis, disassembly), x64dbg (Dynamic analysis, debugging), Process Monitor (System activity monitoring), Sysinternals Suite (ProcExp, Autoruns, ProcMon, TCPView, Handle)

Malware Analysis & Threat Intelligence: VirusTotal, Hybrid Analysis, ANY.RUN, Joe Sandbox, YARA rule writing, MITRE ATT&CK framework mapping, threat hunting methodologies, TTPs identification, IOC extraction and enrichment

Network Security & Analysis: Wireshark (Deep packet inspection, protocol analysis, malicious traffic detection), TCPDump (Packet capture, traffic filtering), Snort (IDS/IPS rule development), Nmap (Network reconnaissance, vulnerability scanning, service enumeration), Burp Suite (Web application security testing, proxy interception)

Security Frameworks & Compliance: NIST Cybersecurity Framework, ISO 27001 (Information Security Management), MITRE ATT&CK, Cyber Kill Chain, OWASP Top 10 (Web application vulnerabilities), incident response lifecycle (PICERL)

Operating Systems & Scripting: Windows Server (Active Directory, Group Policy, Event Logs), Ubuntu/Debian Linux (System administration, log analysis), Kali Linux (Penetration testing, security assessments), ParrotOS, macOS, PowerShell scripting (Automation, log parsing), Python (Security tool development, API integration), Bash scripting

Log Analysis & Event Correlation: Windows Event Logs (4624, 4625, 4688, 4672, 4720, 4732, 4768, 4769), Sysmon (Process creation, network connections, file operations), Active Directory security monitoring, authentication analysis, privilege escalation detection.

Core Security Competencies: Phishing Analysis (Email header inspection, URL defanging, sender authentication), Malware Investigation (Behavioral analysis, static/dynamic analysis, sandbox detonation), Incident Response (Detection, containment, eradication, recovery), Windows Event Analysis (Security, System, Application logs), Network Security (Firewall management, VPN, ACLs, network segmentation), DFIR Fundamentals (Evidence acquisition, chain of custody, forensic reporting), Threat Hunting (Hypothesis-driven investigation, anomaly detection), Vulnerability Management

Cloud & Collaboration Security: GSuite Security (Gmail security logs, Drive audit logs, admin console monitoring), Microsoft 365 Security, cloud security posture management, SaaS security monitoring

EDUCATION

National Forensic Sciences University (NFSU)

M.Sc. Digital Forensics & Information Security (Cyber Security) | CGPA: 9.00 | 2022–24

J.P. Dawar Institute of IT (VNSGU)

B.Sc. Information Technology | CGPA: 6.60 | 2018–22

CERTIFICATIONS

- Cisco — Cybersecurity Essentials
- SkillFront — ISO/IEC 27001 Information Security Associate
- EC-Council — Ethical Hacking Essentials | Digital Forensic Essentials
- C3SA — Certified Cyber Security Analyst (CWL)

DECLARATION

I hereby declare that the above-mentioned details are true and can be verified to the best of my knowledge.

(Abhishek Babariya)
